TECHNICAL RIDER *The Hangman Radioshow plays The Hangman Radioshow*

TERRAIN
At the terrain there must be an area of 6 x 6 m with a completely flat, stable floor. Furthermore if possible the artists would like a location scouting visit to determine the placement of individual elements along the walking route.

PARKING
A place close to the performance space for unloading the van. We can adapt if the information is well communicated in advance.

ELECTRICITY
The organisation must provide electricity of 230V close by the performance area.

TIME OF DAY
the artists prefer to perform during the evening because for some parts of the performance darkness is needed. Sufficient darkness is achieved 45 minutes after sun down. See timetable below for day by day sun down in Western Europe.
If for some reason performing after sun down is not possible this must be communicated well in advance. In that case the parts of the performance that require darkness must be moved inside. This inside space must either have a hanging point for the aerial straps (rated at 300 kg) or must be at least 5 meters high (preferably 7 meters) so the tripod can be built. The inside floor space should then be at least 6 x14 m (see TRIPOD)

TEAM
3 people

BUILD-UP TIME
1 day

TAKE-DOWN TIME
4 hrs

TRIPOD
The artists bring a 7 m high metal tripod. To build the tripod we need a space of approximately 6 x 14 m flat ground. Once the tripod is built it takes only a space of 6 x 6 m.
